1. Round 1

1.1. Reviewer 1

Reviewer:

The quasi-experimental design needs further justification, including details on participant selection and allocation to groups. Clarify the criteria for inclusion and address potential biases.

Provide a more detailed account of the intervention process, including session content and how it specifically aims to improve resilience and social adaptation.

Expand on the statistical methods used for data analysis, including justification for the choice of mixed ANOVA and interpretation of effect sizes.

Strengthen the theoretical foundation connecting psychological capital to resilience and social adaptation, particularly in the context of divorced women.

Response: Revised and uploaded the manuscript.

1.2. Reviewer 2

Reviewer:

Improve the clarity and depth of the results section by providing a more granular breakdown of statistical findings and their practical implications.

Deepen the discussion on the cultural relevance of the intervention to the Turkmen community and how cultural factors influence the intervention's effectiveness.

Elaborate on ethical considerations specific to conducting research with vulnerable populations, ensuring participant confidentiality and informed consent.

Offer detailed recommendations for applying the intervention model in real-world settings, including suggestions for practitioners working with divorced women.

Response: Revised and uploaded the manuscript.

2. Revised

Editor's decision after revisions: Accepted.

Editor in Chief's decision: Accepted.
