1. Round 1

Reviewer 1 1.1.

Reviewer:

The opening sentence describes marriage as "the most sacred and complex relationship." This is subjective and may not align with the scientific tone. Rephrase to maintain a neutral academic style.

The section discussing the goals of marriage (e.g., procreation, intimacy) seems culturally specific. Consider adding a The section on ACT (Acceptance and Commitment Therapy) contains theoretical content but lacks clear transitions. Add linking sentences to improve the flow between concepts.

Ensure that the table formatting adheres to journal standards. Label each variable clearly and indicate whether the values presented are means or another statistical measure.

³ Associate Professor, Department of Psychology, Shahr-e-Qods Branch, Islamic Azad University, Tehran, Iran

The phrase "almost identical" regarding pre-test scores could be strengthened by including a precise statistical comparison, such as a p-value or effect size.

It would improve clarity to provide a brief interpretation of the ANCOVA results below the table, highlighting the main findings in plain language.

The explanation of CBT's mechanisms is thorough, but consider simplifying technical terms for accessibility, or providing brief definitions for concepts like "downward arrow analysis."

1.2. Reviewer 2

Reviewer:

The reference to Navabi-Nejad et al. (2023) is outdated for this article published in 2024. Ensure all citations are the most relevant and recent to uphold academic credibility.

The phrase "meaning in life is a sense of existential integrity" is quite abstract. Clarify or provide a brief example of what constitutes existential integrity for better reader comprehension.

The discussion of ACT's impact on psychological flexibility is strong but lacks citations from recent studies that support these mechanisms. Integrate newer research findings.

You mention that ACT helps individuals "accept their emotions and cognitions," but this is repeated multiple times throughout the text. Condense this to avoid redundancy.
