1. Round 1

1.1. Reviewer 1

Reviewer:

The sentence is informative but lacks citation of at least one seminal Nigerian digital health policy or government report. Consider adding a policy reference to strengthen contextual grounding.

This paragraph effectively summarizes key literature but lacks synthesis. Add a comparative analysis showing what prior studies failed to address that your study uniquely contributes.

This cited prior work is from the same author group. To ensure objectivity, include at least one contrasting study from an independent researcher to balance the narrative.

This sentence repeats information from the Results section almost verbatim. Integrate it analytically instead—explain why this barrier persists (e.g., infrastructure, policy, or socio-economic factors).

Authors revised and uploaded the document.

1.2. Reviewer 2

Reviewer:

This section reads more like a textbook definition. Instead, integrate it analytically—explain how the diversity of MHC roles in Nigeria affects the uptake or application of Mobile Therapy Systems.

The list is exhaustive, but the definition lacks precision. Clarify whether your operational definition of “MTS” includes social media platforms or only clinically validated mobile applications.

The paragraph repeats ideas about unconscious processes multiple times. Please condense and connect how this theory conceptually underpins MTS-based interventions for depression.

The text redundantly restates the same idea twice. Revise for conciseness, and explicitly relate CBT/REBT frameworks to digital implementation (e.g., how MTS can deliver cognitive restructuring tasks).

Authors revised and uploaded the document.
