1. Round 1

1.1. Reviewer 1

Reviewer:

Specify whether allocation to groups was randomized or non-randomized to improve methodological clarity.

Please provide a numerical prevalence range from cited studies to strengthen empirical grounding.

The paragraph synthesizes literature effectively; however, the specific mechanisms of action for MBSR vs. ACT could be more explicitly contrasted.

Please restate the aim in terms of hypotheses or expected directional outcomes.

Please report the Cronbach's alpha obtained in the current sample.

Consider adding a short interpretation of clinical significance, not only statistical significance.

Authors revised and uploaded the document.

1.2. Reviewer 2

Reviewer:

The paragraph is conceptually strong; however, please add a brief statement on the global prevalence of diabetes to contextualize the public health magnitude.

Please include brief information on therapist training and supervision.

Indicate whether effect sizes were interpreted according to established benchmarks.

Include the statistical test (e.g., one-way ANOVA) confirming baseline equivalence.

Please clarify whether partial eta squared values reflect small, medium, or large effects.

Authors revised and uploaded the document.
