1. Round 1

1.1. Reviewer 1

Reviewer:

Expand the review to encompass a wider range of studies on parenting styles, moral development, and psychological well-being across different cultures and religions. This would contextualize the findings within a global perspective, providing insight into the unique contributions of an Islamic lifestyle.

Offer more detailed descriptions of the sampling strategy, including the rationale for the sample size and the process of multi-stage cluster random sampling. Clarification on how the instruments were adapted or validated for the specific cultural context of Tehran would also strengthen the methodology section.

While the study discusses limitations, a more comprehensive exploration of how these limitations affect the generalizability of the findings is needed. Suggestions for future research to address these gaps would be valuable.

Provide more detailed implications for practitioners, educators, and policymakers on how to integrate the findings into programs aimed at improving children's moral and psychological development. Specific strategies for parents to enhance their Islamic lifestyle would be beneficial.

Authors uploaded the revised manuscript.

1.2. Reviewer 2

Reviewer:

Simplify the presentation of statistical data and results for better accessibility to readers not familiar with advanced statistical analyses. Including a brief explanation of key statistical terms could enhance comprehension.

Revise the manuscript for clarity, removing redundant phrases and simplifying complex sentences. Ensuring each section flows logically into the next will improve readability.

Make the conclusion more impactful by succinctly summarizing the key findings and their implications for the field. Highlight how this study adds to the existing body of knowledge on parenting, moral development, and psychological well-being.

Conduct a thorough proofreading session to correct grammatical errors and ensure consistent formatting throughout the document. Attention to detail in presentation will enhance the overall quality of the manuscript.
