I read with a great interest the editorial entitled “Dengue outbreak in Pakistan: Impact on global mass gathering events?” The paper is interesting and only some minor remarks are noted.

1. Abbreviations misuse: Delete all used abbreviations and full terms: KSA, DNV, NIH, Define COVID....

1. Lack of references for some sentences: Please add references after

.....Australia, and the Pacific

.....suitable breeding grounds for the vectors.

..... earthquake that hit Pakistan in 2005.

..... infections, dengue fever, and malaria.

..... and carrying the virus to the healthy ones

..... transmission (from mother to baby).

..... mild fever and self-resolving body aches.

..... symptoms after 2-7 days in most cases

..... end-organ damage and, in rare cases, death.

..... There is no specific treatment for dengue fever.

..... acetaminophen, adequate hydration, and rest

..... previously confirmed dengue infection.

..... the symptomatic treatment of the patient.

2. Revised

Editor’s decision after revisions: Accepted.

Editor in Chief’s decision: Accepted.
